# ALUM (FITKARI) NATURAL MINERAL CRYSTAL

Water Treatment • Cosmetic • Pharmaceutical • Industrial • Traditional Use

# ALUM (FITKARI)

## ABOUT THE PRODUCT

Alum (Fitkari) is a naturally occurring mineral salt known for its purifying, astringent, and clarifying properties. Processed from carefully selected raw mineral crystals, our alum is refined, cleaned, and graded to meet international quality and export standards.

At More Worldwide Exim, we ensure that the natural integrity of the mineral is preserved through controlled crushing, grading, and hygienic handling practices. The result is a high-purity alum suitable for industrial, cosmetic, pharmaceutical, and traditional applications.

## KEY APPLICATIONS

- Water purification and treatment
  - Cosmetic and personal care
  - Pharmaceutical processing
- Textile dyeing and printing
  - Leather processing
  - Traditional household wellness

## FORMS AVAILABLE

- Natural crystal lumps
- Granules
- Fine powder (Custom mesh)

## VISUAL REFERENCE

## PRODUCT SPECIFICATIONS

Appearance	Translucent white crystalline mineral / powder
Purity	High purity, export grade
Solubility	Water soluble
Mesh Size	Customizable as per requirement
Moisture	Controlled and low
Odor	Odorless

## PACKAGING & QUALITY

To ensure safe transport and long shelf life, alum is packed in:

**HDPE Bags • Drums • Bulk Sacks • Private Label Packaging**

Each batch undergoes inspection for size consistency, cleanliness, moisture control, and purity before being approved for packaging.

QUALITY & PROCESS CONTROL

At More Worldwide Exim, quality is built into every stage of handling and processing alum. From raw mineral selection to final export packaging, our controlled methods ensure purity, consistency, and safety for industrial and commercial applications worldwide.

RAW MINERAL SELECTION

Only carefully selected natural alum crystals are approved. Each batch is inspected for visual purity before entering the workflow.

CONTROLLED CRUSHING

Alum is processed under monitored conditions to achieve the required granule or powder form while preserving properties.

MOISTURE CONTROL

Moisture levels are carefully controlled to maintain stability, long shelf life, and export suitability.

EXPORT-STANDARD PACKAGING

Products are packed in moisture-protected, industrial-grade packaging designed to withstand transit and storage without compromising quality.

WHY BUYERS TRUST MORE WORLDWIDE EXIM

- ✓

Strict process control
- ✓

Consistent quality across batches
- ✓

Custom sizing and mesh options
- ✓

Reliable export handling
- ✓

Bulk & private label support

CLEANING & GRADING

Raw mineral crystals are cleaned and graded to remove impurities and inconsistent material, ensuring uniform quality.

SIEVING & SIZING

Material is passed through precision sieves to ensure consistent particle size and mesh specifications as per buyer requirements.

BATCH INSPECTION

Each batch is checked for size consistency, cleanliness, purity, and texture uniformity before packaging approval.
